EDUCATION

Vellore Institute of Technology

B.Tech in Computer Science and Engineering

Vellore, India

Sep. 2022 – Jul. 2026

EXPERIENCE

Synecs Enterprises Private Limited

Software Engineer Intern | Node.js, Express.js, REST APIs, Git

Mar. 2026 – Aug. 2026

Hyderabad, TS

- Developed a **B2B e-commerce Order & Inventory Management module** using **Node.js, Express.js, and REST APIs**, supporting **500+ products and 1,000+ customer orders**.
- Built **15+ REST APIs** for product catalog, inventory, vendor mapping, order creation, and order-status tracking, with request validation and centralized error handling.
- Implemented **real-time inventory synchronization** across order workflows, reducing manual stock updates by **60%** and maintaining consistent product availability.
- Optimized database queries, pagination, and API responses, achieving approximately **30% faster response times** for frequently accessed product and order endpoints.

PROJECTS

FinFlow | React, Node.js, PostgreSQL, Redis, Docker

- Engineered an AI-powered invoice automation platform processing **500+ test invoices**, streamlining extraction, validation, approval, and exception handling with Gemini-based extraction and deterministic business rules, improving processing efficiency by approximately **30%**.
- Implemented multi-level approvals, duplicate and anomaly detection, notifications, audit logging, exception routing, and role-based access control across invoice workflows and user roles.
- Architected asynchronous processing using **PostgreSQL, Redis, and BullMQ**, reducing API blocking during background processing by approximately **40%**.

Analytica | Python, FastAPI, LangGraph, DuckDB, React

- Engineered a multi-agent analytics platform that transforms natural-language business questions into executable analysis and interactive visualizations, reducing manual analysis effort by approximately **50%**.
- Orchestrated specialized **LangGraph agents** for query understanding, SQL generation, deterministic computation, statistical analysis, validation, and response generation using DuckDB, Pandas, NumPy, and Plotly.
- Implemented an independent validation agent to verify computed results and reject unsupported numerical claims, improving analytical response reliability by approximately **25%**.

AskYourDocs | Python, FastAPI, React, FAISS, Docker

- Developed a **RAG-based** document question-answering platform enabling users to retrieve grounded answers from uploaded PDF and TXT documents.
- Implemented document extraction, chunking, **Gemini embeddings**, and **FAISS similarity search** to retrieve relevant context for each query.
- Integrated context-grounded Gemini responses with document-level citations and page references, improving answer traceability by approximately **30%**, with per-session document isolation and Docker deployment.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, TypeScript, SQL

AI: Gemini API, RAG, LangGraph, LLM Applications, AI Agents, Multi-Agent Systems, Embeddings, Vector Search, FAISS, Semantic Search, NL2SQL

Backend: FastAPI, Node.js, Express.js, REST APIs, BullMQ

Databases: PostgreSQL, Redis

Data & ML: Pandas, NumPy, Scikit-learn, DuckDB

Frontend: React, Vite, Tailwind CSS

Tools: Git, GitHub, Docker, Vercel, Render
